Release Briefs

The latest enhancements in the Premier experience

Keep track of mobile hotspot usage for group plans.

By keeping track of mobile hotspot usage, company administrators and your wireless users who have access to Premier, can avoid going over their limits. With the latest enhancement to Premier, if your users are on either the AT&T Business Unlimited PlusSM or AT&T Business Unlimited EnhancedSM plans, they can now see mobile hotspot usage for their wireless numbers separately from standard smartphone usage. This will make it easier for you and your users to know when to adjust hotspot usage to avoid tethering speed reduction for the rest of the bill cycle. Usage information is found on the View Account Information page and View Group and Usage page in Premier Online Care, as well as Premier eBill reports.

Company administrators have access to a saved shopping cart.

To save you valuable time when placing orders, we're saving your shopping cart. Now, when you add items to the cart when shopping for new service, and then leave Premier without completing your order, the cart contents will be saved. The next time you log in, you'll be notified that you have items in your Shopping Cart, and you can quickly complete your order or empty your cart and start again.

We've made it faster to submit feature changes in bulk.

We've streamlined the display and functionality of the Bulk Change Services page in Premier Online Care to make it easier for company administrators to change features. Features are now arranged in categories that can be expanded and collapsed. This reduces the length of the page and the need to scroll down a long list to find the features you want to add to the wireless numbers you are managing.
